Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The present invention relates to the art of communications in general, and, more particularly, to a method and system for paying tolls via wireless communication networks and devices.

The prior art of record in combination or alone fails to teach or suggest these elements of independent claims 1 and 8. For example independent claim 1 has claim limitations such as sensing that the motorist is within range of a base station for a toll plaza having a given toll that is to be paid by the motorist, determining via a mobile switching center whether the motorist has activated a wireless toll payment service associated with the communication device, evaluating via the mobile switching center whether the subscriber has pre-selected a combined billing option for the account, where it has been determined that the service has been activated by the subscriber, sending the charge transaction from the mobile switching center to a toll payment system, where the motorist has not selected the combined billing option, the charge transaction indicating that the toll has been paid by the motorist, and generating a billing record for the motorist at the mobile switching center and sending a non-charge transaction from a mobile switching center to a toll payment system, where the motorist has selected the combined billing option, the non-charge transaction indicating that the toll has been billed to the motorist by the wireless service provider. Independent claim 8 has claim limitations such as means for sensing that the motorist having a communication device is within the range of base station for a toll plaza having a given toll that is to be paid by the motorist, means for determining at a mobile switching center

whether the motorist has activated wireless toll payment service associated with the communication device, means for evaluating at the mobile switching center whether the subscriber has pre-selected a combined billing option for the account, where it has been determined that the service has been activated by the subscriber, means for sending a charge transaction from the mobile switching center to a toll payment system, where the motorist has not selected the combined billing option, the charge transaction indicating that the toll has not been paid by the motorist, and means for generating a billing a record for the motorist at the mobile switching center and sending a non-charge transaction from the mobile switching center to a toll payment system, where the motorist has selected combined billing option, the non-charge transaction indicating that the toll has been billed to the motorist by the wireless service provider. For the above reasons, independent claims 1, 8 and their dependent claims 2-6, 9-11 are allowable.

2. Claims 1-6, 8-11 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
